escape!

TM

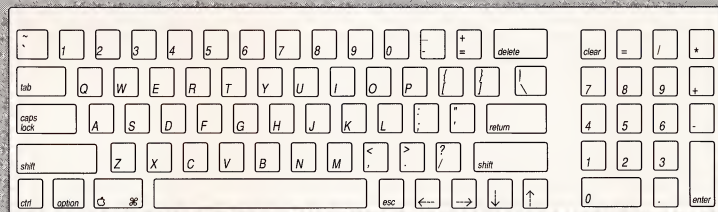

...if Apple's new keyboard is driving you bananas.

Stickers included!

 The wildest program for that non-native new Apple keyboard. Use it if you don't want to monkey around with re-learning a new key layout. You can put the escape key right where it belongs . . . where it's always been. **escape!** is a program that remaps the Macintosh LC and Macintosh Classic keyboards to mimic the layout of the other Macintosh keyboards. **escape!** is simple to install—just choose the startup disk to modify, then place the stickers provided on the altered keys and you're set!
